

Listing of Claims:

1-4 (Canceled)

5. (Currently Amended) A method of hanging a vertical side panel (26) of an electrical cabinet, comprising the steps of: engaging a top flange of the side panel (26), ~~which wherein the~~ top flange has a horizontal portion (28), over an upper suspension member of a frame of the cabinet, and engaging a horizontal lower flange (44) of the side panel (26) with an upturned hook portion (47) at the lower end of the frame of the cabinet such that the upturned hook (47) projects upwardly through an aperture (45) in the lower flange (44), wherein the aperture (45) in the lower flange (44) is aligned with a cutout (46) in a free edge of the lower flange (44) and engagement is effected by engaging the hook (47) in the cutout (46) and then slightly raising the side panel (26) while pushing the same inwardly towards the cabinet before lowering the side panel (26) downwardly onto the hook (47).

6. (Currently Amended) A method according to claim 5, further comprising the step of providing ~~wherein~~ the upper suspension member of the frame of the cabinet ~~is provided at the~~ an upper end of the vertical side members (24) of the frame ~~or on extension pieces (48) which are supported by the side members (24) and project laterally outwardly to extend beyond the side members (24).~~

7. (Currently Amended) A method according to claim 9 6, wherein the step of providing the upper suspension member on extension pieces (48) have comprises the steps of engaging hooks (49) to engage over the upper edges ends of the side members (24), in a recess such that the upper edges are below the an upper extremity of the side members (24), and be bolted bolting the extension members to the side members (24) to be retained in position.

8. (Currently Amended) A method according to claim 7, further comprising the step of using the ~~wherein each~~ extension piece (48) ~~can be used as at least one of either~~ an upper or a lower extension piece.

9. (New) The method according to claim 5, further comprising the step of providing the upper suspension member on extension pieces which are supported by the side members and project laterally outwardly to extend beyond the side members.
